

ASSIGNMENT-1

Programming Language:

A programming language is how we write code, what keywords we use, to tell the computer what to do.

or

a set of instructions that enables humans to communicate with computers—using a series of symbols that serve as a bridge that allows humans to turn our ideas into instructions computers can understand.

Mark-Up language:

a computer system that uses tags or annotations to define the structure, formatting, or layout of a document. Rather than executing logical operations

Product based Company:

the ones that produce high-end products in order to satisfy their customers' requirements. These companies are focused on introducing or producing products that have a high market value. These are the companies that keep on improving their products and upgrading their technologies in order to be in the market.

example: Amazon, Hp, Microsoft, Facebook, Intel..etc..

Service Based Company:

The ones that do not have a particular product but their primary business is to provide services. If we talk more clearly then they work for other organizations or have client-based products. The services they provide are intangible and can be provided in the terms of expertise, amenities, or skills.

Example: TCS, Infosys, Wipro, Tech Mahindra..etc...

Windows application

A Windows application is software that runs on a Windows computer or laptop.

It is designed to work with a keyboard and mouse.

It is installed using an `.exe` file or the Microsoft Store.

It can access the computer's files and hardware.

Example: Microsoft Word.

Mobile Application

A mobile application is software that runs on smartphones or tablets.

It is designed for touch-screen devices.

It is downloaded from the Google Play Store or Apple App Store.

It can use phone features like the camera and GPS.

Example: WhatsApp.

Website

A website is **a collection of related web pages, images, and files grouped under a single domain name** (e.g., *google.com*). Hosted on web servers, it is accessible via the internet through a web browser using a Uniform Resource Locator (URL).

-
- we create the markup lang from the programming lang
 - we create the programming lang with programming lang

ip- dns-url-http-(1960)

then 1969 internet pro

ucla standfort and udah and santa barbara there are the 4 computer create.
they first send the message was log in but they reseve lo then it was crash,

they had a datas so much, that time tin berner lee create the html. then he create the www. arparnet in 1969
